COSMETIC, MEDICAL & VEIN CLINIC

Autumn Newsletter - 2022

We hope you've enjoyed a fabulous Nelson and Marlborough summer; we certainly have.

We don't doubt that many of you who had your varicose veins treated in 2021 will have enjoyed wearing shorts again. But, if you have spent the summer hiding your legs, make a vow to yourself that it won't happen again and call for your complimentary vein assessment and scan, as these colder months are the perfect time of year to consider vein treatment.

With Autumn knocking on the door, it's also an excellent time to think about addressing the unmistakable signs of sun damage. So, we'll share some of the products and treatments that can help address these concerns in this issue.

Best Wishes from David, Rob, Brittany and Jo.

hello!
Autumn

In this issue...

- TWO SUPER HERO SERUMS TO COUNTER SUN DAMAGE
- UNZIP A FRESH COMPLEXION
- PROFHILO VS COSMETIC BOTULINUM
- WHY YOU DON'T NEED VARICOSE VEIN SURGERY!

Affiliated Provider to Southern Cross Health Society for Endovenous Laser Treatment & Ultrasound Guided Sclerotherapy

HERO PRODUCTS FOR SUN DAMAGE

IF YOU'VE INVESTED IN TREATMENTS TO COUNTERACT SUN DAMAGE, THEN SUITABLE HOME SKINCARE WILL HELP TO PROTECT THAT INVESTMENT. AND EVEN IF YOU HAVEN'T YET STARTED YOUR TREATMENT PLAN, OUR HERO PRODUCTS WILL GIVE YOU A HEAD START TO A REVITALISED COMPLEXION.

Complete Pigment Plus contains an advanced formula that combines five key actives, including Tranexamic Acid and Tyrostat-11™, unveiling a more even, radiant looking complexion.

This super hero product addresses dark spots and other forms of pigmentation to help brighten the overall appearance of your skin, while promoting a visibly more even skin tone.

Active C Serum is a powerful antioxidant and peptide serum, formulated with Vitamin C and a peptide complex to help firm the surface of the skin and promote elasticity for a firmer, brighter, illuminated complexion.

This super hero serum works to combat discolouration, dark spots and uneven skin tone, while smoothing the visible appearance of fine lines and wrinkles.

UNZIP A FRESH COMPLEXION Brittany talks sun damage solutions

Autumn is traditionally the time of year when clients ask about reversing sun damage. This damage can manifest as new pigmentation changes and thread veins under the skin or lined and wrinkled looking skin that has lost nutrients and is generally dehydrated. But help is at hand, we offer several treatments that help counteract sun damage and rejuvenate your skin.

IPL – INTENSE PULSE LIGHT:

We use this procedure to selectively treat pigmentation, red veins, or both. IPL requires no downtime, and after a course of 3 to 5 sessions will give a 70 to 80 per cent improvement in appearance. Most clients say they no longer need to hide under makeup after an entire course of IPL.

FRACTORA – FRACTIONAL RESURFACING:

This procedure uses fractionated radio frequency energy to rejuvenate and resurface the skin. It can slow the effects of ageing and restore your skin, so you can look and feel younger. Fractora is perfect for reducing fine lines, tightening the skin, reducing red and brown spots, and improving skin texture.

PLATELET RICH PLASMA:

Sometimes called the Vampire Facial, this treatment involves taking a blood sample, concentrating the platelets from that sample and reinjecting the platelets back into the body to assist in healing and regenerating tissue. It is especially effective for rejuvenation of crinkling skin around the eyes, jawline, lower-face; and around the lips, cheeks, mid-face volume loss, chest and décolletage.

PROFHILO VS COSMETIC BOTULINUM (BOTOX®)

We use both cosmetic botulinum (Botox®) and Profhilo to treat fine lines and wrinkles that come with age. Profhilo anti-ageing treatment certainly doesn't replace cosmetic botulinum. And, in fact, like many of the treatments we offer, you might even consider combining the two for the ultimate anti-ageing solution.

We've created this handy visual guide to help you compare the two treatments.

	COSMETIC BOTULINUM (BOTOX®)	PROFHILO
BENEFITS:	Softer, fresher facial expressions, giving a more relaxed appearance. Wrinkles will become smoother and may even disappear altogether.	Stimulates collagen and elastin, attracting water into the deeper layers of the skin to provide hydration and plumpness.
USE:	Crow's feet, frown lines and forehead lines.	Fine lines and loose, wrinkled or crepey skin across the face, neck, arms and hands.
RESULTS:	Although you may see results in a few days, it can take up to 2 weeks to take full effect.	Initially, we recommend two treatments (approximately six weeks apart), after which you will start to notice significant results.
LONGEVITY:	Although individuals vary, the effects of your cosmetic botulinum treatment will generally last for around 3-4 months. Research shows that regular use every three months in the first couple of years can yield better results which often last longer.	Following two treatments, you will start to notice significant results. But, this product has patented slow-release technology. So, we expect it to offer longer-lasting benefits than some other injectables. We recommend follow-up maintenance appointments at six-monthly intervals.
PAIN LEVEL:	Most patients tolerate the treatment very well, only reporting a slight pinching sensation with each injection, similar to waxing or plucking.	Unlike previous skin-boosting treatments, this one doesn't require a multitude of injections; just five on each side of the face. So, the therapy has clear benefits in terms of comfort.

AND FINALLY... WHY YOU DON'T NEED VARICOSE VEIN SURGERY!

In the past, invasive surgical stripping was the only way to treat the appearance and symptoms of varicose veins. This procedure is expensive because it requires a general anaesthetic and hospitalisation. It can also leave scarring and requires a long, painful recovery period. So, you may be happy to know that these days, you don't need varicose vein surgery to alleviate the painful and debilitating symptoms associated with unsightly varicose veins.

Modern technology allows Dr David Orsborn to offer Ultrasound Guided Foam Sclerotherapy (UGS), Venaseal Glue and the minimally invasive Endovenous Laser Ablation (EVLA). These treatments are walk-in walk-out procedures, allowing you to return to normal activities almost immediately.

We offer complimentary, no-obligation varicose vein assessments with ultrasound scans in Blenheim, as well as our Nelson clinic. Booking an assessment now means you can have your veins treated over the winter months. This is often considered the perfect time for treatment! Why? Well, there are a couple of reasons...

Post-treatment, you will need to wear compression stockings. We find that many of our clients prefer to wear these stockings in the winter when they offer an additional layer of insulation against the cold, rather than the warmer months when they can feel a little hot or uncomfortable. Treating your veins in autumn and winter also means you will also be readying your legs for their spring debut later this year. **Wouldn't it feel nice to know that you will be wearing shorts again in Summer 22/23?**
